Encyclopedia Project of Genome Exploration Research Group in Riken
Genomic Sciences Center and Genome Science Laboratory in RIKEN.
Division of Experimental Animal Research in Riken contributed to
prepare mouse tissues. First strand cDNA was primed with a primer
[5' AGGAGAGAGAGAGCTTTTTTTTTTTVN 3'], cDNA was
prepared by using trehalose thermo-activated reverse transcriptase
and subsequently enriched for full-length by cap-trapper. CDNA went
through one round of normalization to Rot = 5.0 and subtraction to
of sequence [5'

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ;;

Patent No. 6204013
Patent No. 6204013
GENERAL INFORMATION:
GAPPLICANT: Khodadoust, Mehran
TITLE OF INVENTION: NOVEL MSP-5 PROTEIN AND NUCLEIC ACID MOLECULES
TITLE OF INVENTION: AND USES THEREOF
NUMBER OF SEQUENCES: A
CORRESPONDENCE ADDRESS:
ADDRESSEE: LAHIVE & COCKFIELD, LLP
STREET: 28 State Street
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Length 744;

The present sequence encodes for murine trinucleotide repeat protein (TRP). The invention describes methods of producing embryonic stem (ES) cells comprising a heterozygous disruption in a target DNA sequence (preferably gene T243) encoding a TRP and of producing a Knockout mouse comprising a homozygous disruption in a gene encoding TRP, where the disruption inhibits the production of the wild type TRP. The invention of the wild type TRP. The invention also described are methods of determining whether can knockout mouse. Also described are methods of determining whether expansion of the trinucleotide repeat in a gene encoding TRP produces a comprision of the trinucleotide repeat in a gene encoding TRP produces a contract substrates for the identification of drugs, pharmaceuticals, therapies and interventions which may be effective in treating crimucleotide repeat disorders e.g. fragile X syndrome and Huntington's disease. The animal models for trinucleotide repeat disorders e.g. fragile X syndrome and Huntington's disease. The animal models for trinucleotide repeat disorders are ideal condel systems to study the progression of disease in vivo, the molecular basis of these diseases and show the features observed in human disease. Using the mice, it is possible to model both the pathogenic mechanism and the trinucleotide repeat instability in the mouse. Novel transgenic animals useful as animal model for characterization function of a gene encoding trinucleotide repeat proteins (TRPs), contains heterozygous disruption in a gene encoding TRP -Fig 11; 106pp; English Claim 8;

The present sequence represents the DNA sequence of an expanded T243 gene. The T243 gene encodes for a trinucleotide repeat protein (TRP). The Invention describes methods of producing embryonic stem (ES) cells comprising a heterozygous disruption in a target DNA sequence (preferably gene T243) encoding a TRP and of producing a knockout mouse comprising a homozygous disruption in a gene encoding TRP, where the disruption inhibits the production of the wild type TRP. The invention also relates to identifying agents capable of affecting a phenotype of a knockout mouse. Also described are methods of determining whether expansion of the trinucleotide repeat in a gene encoding TRP produces a phenotypic change. The transgent aminals and the calls are useful for identifying compounds capable of ameliorating disease symptoms, and as

trinucleotide repeat disorders e.g. fragile X syndrome and Huntington's disease. The animal models for trinucleotide repeat disorders are ideal model systems to study the progression of disease in vivo, the molecular basis of these diseases and show the features observed in human disease. Using the mice, it is possible to model both the pathogenic mechanism and the trinucleotide repeat instability in the mouse.
                                                                                                                                                                                                                                                                                                                           231
                                                                                                                                                                                                                                                                                                                                                                         291

The PRO polypeptides are useful to detect other PRO polypeptides, to link bioactive molecules to cells expressing PRO polypeptides, to modulate biological activities of cells expressing PRO polypeptides, and to detect the presence of mammalian lung, colon, breast, prostate, rectal, cervical or liver tumours by comparing PRO polypeptide expression in a cell sample to that in a control sample. Some of the 275 sequences are also useful to stimulate the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, the proliferation or differentiation of chondrocytes, the proliferation or gene expression in pericyte cells, the release of proteoglycans from cartilage, the proliferation of inner ear utricular supporting cells or of T-lymphocytes, the release of a cytokine from peripheral blood
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ž
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Isolated, secretory and transmembrane PRO polypeptide used to detect other PRO polypeptides, link bioactive molecules to cells expressing PRO polypeptides, and detect the presence of mammalian tumours e.g.

monocytes (PBMCs), or the proliferation of endothelial cells. Some of the PRO polypeptides may modulate glucose or free fatty acid uptake by skeletal muscle cells or by adipocytes; or inhibit binding of A-peptide to factor VIIA. The PRO polypeptides can be used in assays to identify molecules involved in binding interactions. The polynucleotides encoding PRO polypeptides can be used to generate probes, antisense RNA/DNA, transgenic or knock out animals and can be used in gene therapy.

The present sequence encodes for human trinucleotide repeat protein (TRP). The invention describes methods of producing embryonic stem (ES) cells comprising a heteroxygous disruption in a target DNA sequence (preferably gene T243) encoding a TRP and of producing a knockout mouse comprising a homozygous disruption in a gene encoding TRP, where the cisruption inhibits the production of the wild type TRP. The invention also relates to identifying agents capable of affecting a phenotype of a knockout mouse. Also described are methods of determining whether a knockout mouse. Also described are methods of determining whether compounds capable of ameliorating disease symptoms, and as then trinucleotide repeat in a gene encoding TRP produces a contifying compounds capable of ameliorating disease symptoms, and as therapies and interventions which may be effective in treating control of drugs, pharmaceuticals, therapies and interventions which may be effective in treating control of a disease. The animal models for trinucleotide repeat disorders e.g. fragile X syndrome and Huntington's disease. The animal models for trinucleotide repeat disorders are ideal condel systems to study the progression of disease in vivo, the molecular model systems to study the progression of disease in vivo, the molecular the mice, it is possible to model both the pathogenic mechanism and the trinuclacities are incompanian.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel transgenic animals useful as animal model for characterization of function of a gene encoding trinucleotide repeat proteins (TRPs), contains heterozygous disruption in a gene encoding TRP -

encode New isolated human genes and the secreted polypeptides they encoduseful for diagnosis and treatment of e.g. cancers, neurological disorders, immune diseases, inflammation or blood disorders

Claim 1; Page 233; 380pp; English.

This sequence represents a nucleic acid molecule which encodes a secreted human protein. The gene number, and the clone it is derived from, are detailed in the descriptor line. The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin Fc portion (e.g. AAX04302) for increasing the stability of the fused protein as compared to the human protein only. The invention relates to 86 novel genes and their fragments (nucleic acid sequences: AAX04311-X04410; amino acid sequences AAW78126-W78225) which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the amount of the new

5
polypeptides in a sample or by determining the presence of mutations in the new polynuclaotides. Specific uses are described for each of the 86 polynuclaotides, based on which tissues they are most highly expressed in (see AAXO4311 for described uses).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Immunogenic protein; cancer; ovarian tumour; T-cell stimulation; ss; gene therapy; cytostatic; T-cell expansion; nucleic acid hybridisation;

The invention comprises compositions used for the therapy and diagnosis of ovarian cancer. The compositions comprise one or more ovarian tumour proteins, their associated polynuclectides, or immunogenic portions of the proteins. The ovarian tumour polynuclectides and polypeptides are useful for stimulating and/or expanding T cells specific for a tumour protein. They are also useful for inhibiting the development of cancer in a patient with an ovarian tumour DNA or protein by incubating isolated T-cells allowing them to proliferate, and administering to the patient. The sequences can be used as markers for cancer, for example, to monitor ovarian cancer progression. Probes and primers are useful in nucleic acid hybridisation, in detecting the presence of complementary sequences in a given sample, for preparing mutant species and for preparing other genetic constructions. Sequences AAS23820-AAS25231 and AAS25328-AAS25549
                                                                                                                                                                                                                                                                                                 cancer

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel ovarian tumor proteins, and nucleic acids encoding them, used to treat and diagnose cancers, particularly ovarian cancer -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAH82377 to AAH83878 represent human ovarian tumour-associated polynucleotide sequences which encode ovarian tumour proteins. The ovarian tumour protein and polynucleotide sequences have cytostatic activity, and can be used in gene therapy and vaccine production. The ovarian tumour proteins and polynucleotides can be used to inhibit.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          the development of cancer, particularly ovarian cancer. They can also be used to diagnose the onset and progression of cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   413

cytostatic; antibacterial; antifungal; antiviral; antidiabetic; antibacterial; antifungal; antiviral; antidiabetic; antibacterial; antifungal; antiviral; antidiabetic; antibacterial; antifungal; antidiabetic; antisathmatic; vulnerary; antifulcer; osteopathic; neuroprotective; cootropic; antiparkinsonian; antipacriatic; cerebroprotective; anticonvulsant; and antidepressant. The SESTs can be used for gene therapy and in vaccines. The SESTs are useful as probes for the content of isolation of full-length cDNAs and genomic DNA contents which correspond to the SESTs. Proteins encoded by the SESTs are useful in assays for determining biological activity and raising antibodies. They may be useful for treatment of autoimmune disorders antibodies. They may be useful for treatment of autoimmune disorders (multiple sclerosis, insulin dependent diabetes), allergic conditions cateoporosis, osteoarthritis, central nervous system disorders (Alzheimer's, Parkinson's, Huntington's disease, stroke), coagulation disorders (haemophilat, thrombosis), inflammatory disorders (conditions) depression and disorders (baenophilat) fungal or viral infections, depression and psoriasis. AAA43420 to AAA43425 represent linker variants which are given to the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
sequence tags (SESTs), isolated from human, mouse, xenopus and rat tissue sources. The SESTs can have a range of activities depending on the tissues they were isolated from. The activities include: ofhemotactic; proliferative; immunoomodulatory; haematopoletic; chemokinetic; analgesic; haemostatic; thrombolytic; antiinflammatory;

The present sequence is the coding region of myocardium secreted protein 5 (MSP-5) cDNA which was isolated from a cDNA library prepared from a cardiac tissue sample obtained from a biopsy of a 42 year old woman suffering from congestive heart failure. The MSP-5 protein has hypotensive and cardiant activities. It is highly expressed in heart, print, pracents, small intestine and pituitary gland. The present sequence is used to modulate a variety of cellular processes, especially cardiac cellular processes. MSP-5 is used co modulate the activity of one or more proteins involved in a cardionyascular disorder, e.g. congestive heart failure or cardiomyopathy. Conditions and diseases which can be treated include hypertension,

AARB8817 - AARB8419. Included in the invention are primers

CDNA sequences of the invention. The invention also includes methods for the production of antibodies directed against the proteins, and cDNA

Sequences, which can be used in vaccines. The polynucleotide sequences

can be used in gene therapy. The polynucleotide sequences and the proteins they encode may be used in the prevention, treatment and alaquences associated with inappropriate secretory

proteins may also be used as DNA probes in diagnostic assays

cequences may also be used as DNA probes in diagnostic assays

cequences may also be used as DNA probes in diagnostic assays

cequences may also be used as DNA probes in samples. They may also be used to similar nucleic acid sequences in samples. They may also be used to study the expression and function of secretory proteins/membrane configurations and their role in metabolism. The polypeptides may be used as antigens in the production of antibodies against them and in assays to identify modulators (agonists and antagonists) of expression and activity. The antibodies and antagonists may also be used as therapeutic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Primer specific for DNA encoding secretory/membrane protein SEQ ID 538
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Nucleic acids encoding secretory proteins/membrane proteins, useful in

                                                                                                                          q
                                                                                                                                                                                                                                                                                                     AAB3661 to AAB36675. The proteins can have cytostatic, anti-inflammatory, hemmes atopoletic, anti-rogaliant, immunomodulatory and hepatotropic activities, and can be used as cell migratory agents, cell proliferation-stimulants and cell differentiation-inducers. The proteins are useful in the treatment and prevention of diseases such as cancer, lung function disorder, liver function disorder, gastrointestinal disorder and immune diseases. AAC90116 to AAC90755 represent PCR primers which are used in the exemplification of the present invention.

which encode human secretory or membrane proteins represented by this interaction related to the invention are primers.

AAR98317 - AAR98419. Included in the invention are primers

AAR98317 - AAR94295 and AAF6232 - AAF62318 which are used to isolate the coba sequences of the invention. The invention also includes methods for the production of antibodies directed against the proteins, and cDNA sequences, which can be used in vaccines. The polynucleotide sequences can be used in gene therapy. The polynucleotide sequences and the proteins they encode may be used in the prevention, treatment and flagnosis of diseases associated with inappropriate secretory proteins any also be used as DNA probes in diagnostic assays

CC (e.g. polymerase chain reactions (PCR) to detect and quantitate the presence of similar nucleic acid sequences in samples. They may also be used to study the expression and function of secretory proteins/membrane collypetides and function of secretory proteins/membrane collypetides and antagonism. The polypetides may be used as antigens in the production of antibodies against them and in assays to identify modulators (agonists and antagonists) of expression and antagonists may also be used as therapeutic agents to down regulate expression and activity. The antibodies and antagonists may also be used as therapeutic agents to down regulate expression and activity. The antibodies and antagonists may also be used as therapeutic agents for detecting the presence of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               무
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                (ELISA). Examples of diseases which may be treated include rheumatoid arthritis and diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Nucleic acids encoding secretory proteins/membrane proteins, useful gene therapy or as candidate target molecules in drug development -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This invention relates to nucleic acid sequences AAF93744 - AAF93916
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human cDNA encoding a membrane or secretory protein clone PSEC0237.

This invention describes a novel human polynucleotide that encodes a calcitonin-like polypeptide which has osteopathic, antidiabetic and hypotensive activity and also acts as a vasodilator. Antibodies derived from the product of the invention can be used to isolate and purify the polypeptide sequences. The polypeptides can be used as neuromodulators in a variety of peripheral organs. They can be used in the treatment of Paget's disease, hypercalcaemia, and osteoporosis. They can also be used to treat Raynaud's disease, and may be able to inhibit the progression of type I diabetes. The polypeptide sequences may be administered as vasodilators to treat hypertension.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            281

AAA16618 to AAA16697 encode the human secreted proteins given in AAY94898 to AAY94890, isolated from human adult brain, adult thyroid, adult retina, feetal carcinoma, adult blood, adult neural, feetal kidney, adult placenta, adult testis, whole embryo, adult cartilage, kidney, cotal brain, adult thymus, foetal placenta, adult uterus, adult tumour, and adult bladder, cDNA libraries. The polynucleotides and proteins are predicted to have bloiogical activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals. The polynucleotides can be used as markers for tissues in which the protein is preferentially expressed, as molecular weight markers on Southern gels, and as chromosome markers or tags to identify chromosomes or to map gene positions. The proteins can be used in the treatment of immune deficiencies and disorders, such as severe combined immunedeficiency (SCID), as well as viral, bacterial, fungal and other infections. These infections include human immunodeficiency virus (HIV), hepatitis, herpesviruses, mycobacteria, Leismania spp., malaria and candidasis: The proteins so an be used to treat autolimmune disorders such as connective tissue disease, multiple sclerosis, systemic lupus erythematosis, rheumatoid arthritis, autolimmune pulmonary inflammation, cullialn-Barre syndrome, autoimmune thyroiditis, insulin dependent
                                                                                                                                                                                antibacterial; antifungal; cytostatic; antiinflammatory; dermatological; antidabetic; antiasthmatic; antiarthritic; antirheumatic; protozoacide; antithyrold; immune deficiency; severe combined immunedeficiency; SCID; infection; HIV; hepatitis; malaria; autoimmune disorder; systemic lupus; connective tissue disease; multiple sclerosis; erythematosis; rheumatoid arthritis; autoimmune pulmonary inflammation; asthma; guillain-Barre syndrome; autoimmune thyroiditis; myasthenia gravis; insulin dependent diabetes mellitus; graft-versus-host-disease; autoimmune inflammatory eye disease; allergy; ss.
